HELP

How to Navigate the web app?

First open the site.

In the main landing page, there are different featured products listed.

If the product you want to buy is in the page you can click on the product name or on the hover link.

Or else you can visit the shop page or even navigate directly to any category of product you want from the main page.

After that you can add the products to cart. The cart will be loaded with the products you add and automatically calculate all the price and tax amounts.

Finally you can checkout from the cart. In the checkout form you can login or checkout as a guest.

And also you can add any discount coupons you might have.

All the necessary calculations are automatically performed.

After a successful checkout a thank you page is loaded and then is redirected to home page.

How to Register or Login?

Go to the Join form from the link present in the header.

There add all the user credentials and a minimum 8 digit password.

Then click on Register. After successful registration, you are automatically redirected to landing page

How to Checkout without logging in?

In the checkout form you can checkout as a guest.

User credentials is save in orders table and then checout is finalized

After a successful checkout a thank you page is loaded and then is redirected to home page.

How to Buy Products?

Go to the shop page.

Look and find the product you want to buy.

Click on the image link to go on the product page.

There you can see whether the stock for the product is available or not

If its available you can add it to cart and check it out providing certain credentials.

What if the item stock finishes while its in cart?

Certain checking functions are implemented right before checkout to see whether the quantity of the product is more than the quantity you order.

If the product expires. You'll get and error message saying product has been expired.

What are the known limitations of the application?

Currently user can only buy a single quantity of product at any instance
